MartPoint

Automobile

USE CASE SCENARIO

A day at Platinum Motors

See how a car dealership uses MartPoint to list vehicles, track enquiries, sell cars, and showcase stock online.

AUTOMOBILE WORKFLOW

What a car dealership does every day

Your job is to keep vehicle records accurate, respond to buyer enquiries, and close sales without losing track of deposits and balances. MartPoint gives you vehicle-specific fields, photo galleries, and an online showroom built for cars.

Set up dealership

→

Vehicle data

→

Add vehicle

→

Enquiry

→

Sell

✔ Always do

- Set the business type to Car Dealership first.
- Fill in every vehicle field — buyers compare details.
- Upload multiple photos for each vehicle.
- Reserve a vehicle before accepting a deposit.
- Mark a vehicle Sold only after full payment.

✖ Never do

- Sell a vehicle that another staff member has reserved.
- Leave the status as Available after taking a deposit.
- Upload blurry or dark photos.
- Forget to enter the VIN and license plate.
- Hand over keys before the sale is saved in the system.

Before your first vehicle

- **Set the business type** — choose Car Dealership in Business Profile.
- **Check Vehicle Data** — makes, models, and dropdown options.
- **Pick a storefront theme** — Auto Modern,

Customer service at the showroom

- **Respond quickly** — reply to WhatsApp enquiries the same day.
- **Share the listing** — send the vehicle page link on WhatsApp.
- **Be transparent** — disclose condition,

MORNING

Set up the dealership

Chuka manages Platinum Motors. Before adding any cars, he tells MartPoint that the business is a car dealership and chooses the tools he needs.

Chuka, Dealer Principal

"We sell cars, not grocery items. I need vehicle-specific fields such as Make, Model, Year, Mileage, VIN, Condition, and Body Type. Some months we also sell a few parts, but I want parts to be optional."

What Chuka does in MartPoint

1. He opens **More → Business Profile**.
2. He picks **Car Dealership** as the industry type. MartPoint automatically turns on the right features.
3. He keeps **Vehicles** and **Vehicle Services** turned on.
4. He decides whether to keep **Auto Parts** on or off. He leaves it off for now.
5. He saves the profile. A new **Automobile** section appears in the sidebar.

Why the profile matters: Choosing **Car Dealership** gives you vehicle fields, a purchase order that talks about "Vehicle Purchases," and online store themes built to sell cars. The labels and menus change automatically.

→ Next: prepare your vehicle master data.

LATE MORNING

Prepare vehicle master data

Before adding cars, Chuka wants the dropdown lists ready — Toyota should only show Toyota models, and the body-type, fuel, and transmission lists should be clean.

Chuka, Dealer Principal

"I don't want staff typing 'Toyota Corrola' in one record and 'Toyota Corolla' in another. If they pick Toyota, the Model list must only show Toyota cars."

What Chuka does in MartPoint

1. He goes to **Automobile → Vehicle Data**.
2. He reviews the preloaded **Makes** such as Toyota, Honda, Ford, and BMW.
3. Under **Models**, he checks that each model is linked to its make. Corolla is under Toyota, Civic is under Honda, and so on.
4. He adds any missing makes and models, edits typos, and deletes ones he does not need.
5. He checks **Dropdown Options** for Body Type, Fuel, Transmission, Condition, Drivetrain, and Colour, adding or removing values as needed.

What the master data controls

Makes
Toyota, Honda, Ford, BMW, etc.

Models
Linked to a make — Corolla belongs to Toyota

Body Type
Sedan, SUV, Truck, Hatchback

Fuel Type
Petrol, Diesel, Hybrid, Electric

Transmission
Automatic, Manual

Condition
New, Foreign Used, Locally Used

Linked Make and Model: When a staff member selects **Toyota** in the vehicle form, the **Model** list automatically only shows Toyota models. This keeps records consistent and speeds up data entry.

→ Next: add your first vehicle.

MIDDAY

Add a vehicle to stock

A 2005 Toyota Corolla has just arrived. Ada, the sales administrator, adds it to the system with all the details and a photo gallery.

Ada, Sales Administrator

"This car is Foreign Used, 45,000 km, grey, 1.8L engine, automatic, front-wheel drive. We bought it for N6.5m and we are selling for N8.5m. I need to upload the interior, exterior, and engine photos."

What Ada does in MartPoint

1. She opens **Automobile → Add Vehicle**.
2. She selects **Make: Toyota**, then **Model: Corolla**, and fills in **Year: 2005**.
3. She completes the specification fields: **Colour, Mileage, Body Type, Fuel Type, Transmission, Condition, Drivetrain, Engine Capacity, VIN,** and **License Plate**.
4. She enters the **Cost / Purchase Price** and the **Selling Price**.
5. Under **Vehicle Gallery**, she selects all the photos and uploads them. The first photo becomes the main image.
6. She sets the status to **Available** and saves the vehicle.

What the form captures

Core details
Make, Model, Year, Colour, Mileage

Specifications
Fuel, Transmission, Body Type, Drivetrain, Engine Capacity

Identifiers
VIN, License Plate, Vehicle Code

Pricing
Cost price, Selling price, Status

Gallery
Multiple photos — first one is the main image

Status
Available, Reserved, or Sold

Photo tips: Take photos in good daylight. Capture the front, rear, both sides, interior, dashboard, and engine bay. The first photo you upload becomes the main image on the online showroom and vehicle cards.

→ Next: handle customer enquiries.

AFTERNOON

Handle a customer enquiry

A customer sees the Corolla on the online showroom and sends a WhatsApp message. Emeka, the sales executive, opens the vehicle record and replies quickly.

Customer (via WhatsApp)

“Hi, I saw the 2005 Toyota Corolla on your website. Is the price negotiable? Can I book an inspection?”

What Emeka does in MartPoint

1. He opens **Automobile → Vehicle List** and finds the Corolla.
2. He taps the WhatsApp link on the vehicle to send a reply from the dealership number.
3. The customer likes the car and asks to reserve it. Emeka opens the vehicle and sets the status to **Reserved**, adding the customer’s name.
4. He marks the car as reserved so no one else sells it while the customer finalises payment.

Vehicle statuses

Available
Shown on the online showroom — ready to sell

Reserved
Hidden from the public site — deposit taken

Sold
Hidden from the public site — sale completed

Why it matters
Prevents double sale and keeps the website accurate

Status keeps everyone in sync: Available, Reserved, and Sold statuses control what appears on the website and what the sales team can offer. A Reserved car is hidden from the public listing and protected from double sale.

→ Next: record the sale and balance.

LATE AFTERNOON

Sell the vehicle

The customer pays a deposit, then completes the balance. Emeka finalises the sale in the system and hands the car over.

Emeka, Sales Executive

“The customer paid N3m today and will bring the N5.5m balance next week. I need to record the deposit, show the balance, and print a receipt.”

What Emeka does in MartPoint

1. He opens the Corolla record and clicks **Sell Vehicle**.
2. He enters the **Customer Name** and the **Amount Paid** today.
3. MartPoint calculates the **Balance Remaining**.
4. He saves the sale. The vehicle status changes to **Sold** and the receipt is ready to print or send on WhatsApp.
5. When the balance is paid, he records the final payment and marks the sale as fully paid.

What the sale updates automatically

Vehicle status
Changes from Reserved to Sold

Online listing
Removed from the public showroom

Receipt
Generated with payment and balance

Reports
Recorded in sales and vehicle reports

Deposits and balances: Always record the deposit amount on the sale screen. MartPoint tracks the balance remaining so you and the customer can see exactly what is left to pay. Do not mark the sale as fully paid until the balance is settled.

→ Next: showcase vehicles online.

EVENING

Showcase vehicles online

Chuka checks how the dealership looks to customers online. The vehicles are listed, the gallery works, and WhatsApp enquiries go straight to the sales team.

Chuka, Dealer Principal

"I want the website to feel like a modern dealership. Fast loading, good on phones, and every car should have several photos that customers can click through."

What customers see online

1. They visit the dealership store URL and see the hero banner and trust badges.
2. They tap **Collection** or **Vehicles** to see all available cars.
3. They tap a car to open the detail page and click through the photo gallery.
4. They tap **Request on WhatsApp** to ask about the car directly.
5. Only vehicles with the status **Available** are shown. Reserved and Sold cars are hidden.

Choose a dealership theme

Auto Modern
Clean blue and white — fast and professional

Auto Luxe
Dark and premium — gold accents for luxury brands

Auto Garage
Bold red and charcoal — trucks, SUVs, performance

How to switch
Storefront Theme settings in the admin

Speed and mobile: All three dealership themes use minified images and load fast on phones. The vehicle gallery switches thumbnails with one tap, so customers can browse every photo without waiting.

END OF DAY

Quick fixes & support

Quick fixes

- **Vehicle not saving:** check that Make and Model are selected — they are required fields.
- **Photos not uploading:** keep each photo under 2MB and use JPG or PNG format.
- **Vehicle not showing online:** confirm the status is Available and the online store is turned on.
- **WhatsApp button not working:** check that the store WhatsApp number is set in Storefront Settings.
- **Model list empty:** the model must be linked to a make in Vehicle Data first.
