USE CASE SCENARIO

Zonat Gadgets

A complete MartPoint use case for Zonat Gadgets: computers and smartphones tracked by serial number or IMEI, accessories counted by quantity, and inverters, solar systems and UPS managed from supplier receipt through sale, installation handoff and after-sales support.

START HERE

One gadget business, six connected ranges

Zonat Gadgets sells computers, accessories, smartphones, inverters, solar equipment and UPS. MartPoint connects purchasing, stock, sales, customer records, online enquiries and reports while each product keeps the right level of tracking.

How the store works

- **Set up** product categories, brands, suppliers, branches, prices and staff permissions
- **Receive** serial number or IMEI tracked devices; count accessories and stock in base units
- **Sell** at POS, by invoice, to resellers, or through the online storefront
- **Support** device warranty claims and record delivery or installation handoffs
- **Review** stock by branch, low-stock items, sales, customer balances and margins

Product families at Zonat Gadgets

RANGE	EXAMPLES	TYPICAL TRACKING
Computers	HP laptops, Lenovo desktops, monitors, printers	Serial number on each warranty-bearing unit
Smartphones	Samsung, Tecno, Infinix and iPhone devices	IMEI for each phone; serial number for other tracked devices
Accessories	Chargers, cables, mice, keyboards, cases and adapters	Quantity stock; optional pack or carton selling units
Inverters & UPS	Home/office inverters, line-interactive UPS, backup units	Serial when warranty or service lookup needs unit identity
Solar	Panels, charge controllers, batteries, mounting and cabling	Serial for individually warrantied equipment; quantity for consumables

Enable the profile: *Settings → Business Profile → Gadget Store*. The Gadget Store preset uses MartPoint's **Tech Hub** storefront and electronics dashboard/workflow, and enables IMEI and warranty tracking. In *Feature Flags*, also switch on **Serial Number Tracking** if you want serials captured for computers, inverters, UPS and other warrantied equipment. The Electronics categories include **Laptops & Computers**, **Phones & Tablets**, **Accessories**, and **Power & Solar**. Add UPS as its own subcategory if you want it separated in your catalogue.

The daily flow

- **Owner** checks sales, margins, approvals and stock alerts
- **Stock controller** receives supplier deliveries and moves goods between branches
- **Sales team** quotes, sells, takes payment and prints a customer receipt
- **After-sales** checks serial number or IMEI and purchase history when a customer returns

Next → create useful product records and decide what needs a serial number.

SETUP — STEP 1

Products: devices, accessories & power equipment

Catalog → Product List → Add Product. Decide whether each product needs unit-level identification. Phones use IMEI tracking; turn on Serial Number Tracking for computers and warrantied power equipment. Accessories and consumables usually use quantity tracking.

Add a serialized product · Fill in each field

Item Type
`Item` — physical stock

Product Name
`Samsung Galaxy A-series — 128GB, Black` — put storage, RAM and colour in the name; a generic model name alone can describe several configurations

Product Code / SKU / Barcode
`SGA-128-BLK` — your own code; the box barcode scans here if the distributor prints one

Brand / Category
`Samsung · Phones & Tablets` — the brand also powers margin-by-brand reports and the online store's brand row

Base / Stock Unit
`Piece` — always. One unit = one physical device

Serial number / IMEI tracking
On — each unit gets its own identity. IMEI tracking for phones; enable Serial Number Tracking for computers, UPS units and other equipment with a printed serial

Warranty Period
`12 months, subject to supplier/manufacturer terms` — starts counting on the sale date and may be shown on the receipt; confirm coverage against the supplier/manufacturer warranty terms

Purchase Price / Sale Price / MRP
`118,000 · 149,000 · 159,000` — MRP shows as the strike-through on the online store

Wholesale Price
`129,000` — what the reseller pays; the POS wholesale button and account invoices use it without negotiation

Opening Stock / Alert Qty
`0` — tracked devices enter through purchases so every unit gets its serial captured · alert `3` for fast-moving devices; set a suitable alert for each product

Product Image & Description
Clean photo + honest spec description — this is what the online store shows

Add a bulk product — same screen, different answers

Product Name
`Zonat USB-C Cable 1m` — no serial needed; a cable is a cable

Serial / IMEI tracking
Off — quantity tracking only

Purchase / Sale Price
`1,800 · 3,500`

Selling Units
`Pack of 10` at `32,000` (reseller rate) · `Carton of 50` at `150,000` — stock always counts in pieces; customers buy in declared packs

Opening Stock
Type it once for what you already own — restocks after day one go through Purchases

DO

Serialize **everything a customer might claim warranty on** — smartphones, computers, inverters, UPS and warrantied solar equipment.

The identifier helps staff connect a unit to its purchase and sale record.

DON’T

Don’t serialize accessories — twenty minutes spent typing cable serials buys you nothing but a slower receipt.

Next → branches, price lists and who may do what.

SETUP — STEP 2

Branches, price lists & roles

Zonat Gadgets sells from the showroom but holds bulk stock at the back. And not everyone at the till may give discounts or see costs.

Branches — where stock lives

BRANCH	USED FOR
`Showroom Floor`	What POS and the online store sell from — display units and ready stock
`Stockroom`	Bulk cartons, sealed units awaiting display, slow movers

When Ngozi unpacks a carton for display, she runs a **stock transfer** Stockroom → Showroom. The dashboard's per-branch stock always answers "where is it?" — a device shows as Showroom only when it physically sits on the floor.

Price Catalogue — your printed/loaned price list

The profile enables the **Price Catalogue**: a clean sell-price listing customers can be shown or handed — the modern replacement for the laminated price board. Keep it current and the floor team always quotes the same number.

Roles & permissions — who touches what

PERMISSION	ALLOWS	TYPICAL ROLE AT ZONAT GADGETS
`sales_add / items_view`	POS and invoices	Chidi — sales rep
`purchase_add / purchase_view`	Supplier orders and receipts	Ngozi — stock control
`stock_transfer / stock_adjustment`	Move and correct stock between branches	Ngozi only
`sales_return_add`	Process returns	Chidi, with manager sign-off
`manager_approvals`	Approves discounts above the set limit	Kelechi — owner
`online_store_view / _edit / _orders`	Storefront content and order fulfilment	Kelechi / Chidi
`reports` group	Margin, stock and sales reports	Kelechi

The discount guard is the one to set on day one: reps can discount up to your configured limit — anything deeper routes to the owner's **Pending Approvals** queue before the sale completes.

CHIDI · SALES REP

Customer wants ₦50,000 off a solar backup package — my limit is ₦15,000.

Send it through — it waits in my approvals queue. I approve from my phone and you complete the sale. Or I don't, and the price stands.

Next → receiving stock — where serials and serial number or IMEIs enter.

PROCUREMENT

Purchases — serials enter here

Purchases → New Purchase. A shipment of tracked devices is received with each unit's serial/IMEI where the relevant Serial Number Tracking or IMEI Tracking feature is enabled. Accessories and consumables are received by quantity.

New Purchase → Fill in each field

Supplier
`Lagos Tech & Power Distributors` — their invoice number goes on the record too

Purchase Status
`Received` adds stock now — *Ordered / Draft* hold the order without touching stock; *Partially Received* posts only what arrived

Branch (Warehouse)
`Stockroom` for bulk inbound; transfer to Showroom as you display

Items — serialized line
Samsung Galaxy A-series 128GB `×10` @ ₦118,000 each. On the serial number or IMEI row beneath, enter **each unit's serial number or IMEI** (or serial) — scan or type from the box labels. Ten tracked units = ten identities

Items — bulk line
Zonat USB-C Cable 1m `×200` @ ₦1,800 — quantity only

Payment
Paid now or on account — the supplier balance tracks through supplier payments as usual

Power products: record the kit clearly

Use separate item records for the inverter, each battery, panels and accessories unless you actually sell them as one stocked kit. This keeps quantities, costs and replenishment clear. Add model, capacity, voltage and compatible battery/panel details to the product name or description. For an installation sale, record the sold items and agree the site survey, delivery and installer handoff with the customer; don't treat the item invoice as proof that installation has been completed.

Why the serial row matters at receipt

WHAT ZONAT RECORDS	MARTPOINT USES IT FOR
Serial / IMEI per unit	Which exact device went to which customer on which date — the answer to every "is this ours?"
Unit cost on the same row	True cost basis per unit — a discounted supplier batch doesn't blur the margin on older stock
Missing-swap protection	A "returned" phone whose serial number or IMEI never shipped from you can't be argued — it simply isn't in the register

Serialized stock position: after the receipt posts, *Product List* shows Samsung Galaxy A-series 128GB with `10` in stock — and the purchase/sale records retain the unit identifiers where serial tracking is enabled. A sale can only complete when the rep picks which physical unit leaves.

NGOZI · STOCK CONTROL

Distributor sent 10 smartphones but one box has no serial number or IMEI printed on it.

For a phone, check Settings → About Phone for its IMEI. For a laptop, inverter or UPS, use its manufacturer label and confirm Serial Number Tracking is enabled for the store. Record the identifier in the matching field.

Next → the till day — scans, wholesale, approvals.

SALES

POS — the till day

Zonat’s till handles mixed baskets: the cashier selects the exact tracked phone or computer unit, while accessories and solar consumables decrement by quantity. Wholesale prices can serve installers and resellers.

At the till

SALE	ON SCREEN	WHAT HAPPENS
One smartphone	Scan box barcode / tap Samsung Galaxy A-series 128GB → pick the unit’s serial number or IMEI	That exact unit leaves stock; its identifier is recorded with the sale where supported; warranty terms are confirmed on the receipt
Accessory bundle	Zonat USB-C Cable → `Pack of 10`	−10 pieces at pack price — stock still counts in pieces
Mixed cart	smartphone + case + cable + 20W charger	One receipt — serialized line picks its unit, bulk lines take quantity
Wholesale	POS → wholesale button → customer `BrightGrid Solar & IT (Ikeja)`	Cart flips to wholesale prices; balance sits on their account until paid
Gift card / loyalty	Redeem at payment	Card balance applies; points accrue on the remainder

When a rep wants to discount

Chidi applies a ₦40,000 discount on the UPS — over his ₦15,000 limit

Sale routes to **Pending Approvals** — the customer can still complete a quoted sale on hold OWNER DECISION

Kelechi approves or declines from his phone — approved, the sale completes at the discounted price

Returns & swaps

Customer returns a unit within policy — look up the original sale (receipt number or customer)

Process the return on that sale; the serialized unit’s serial number or IMEI returns to sellable stock — same identity, full trail

Refund as cash-out or **store credit** — Zonat Gadgets’s policy on opened boxes is credit

Store credit over cash refunds: opened-box returns land as credit on the customer’s record — the money stays in the business and the customer’s balance shows honestly on their next visit or invoice.

Next → warranty — the claim that tests whether the serial work paid off.

AFTER-SALES

Warranty — the claim

Six weeks after purchase a customer walks in: “the UPS is not holding backup power.” This is the moment the serial discipline either pays off or embarrasses you.

The claim, step by step

Look it up — enter the serial number or IMEI (from the device, the box, or the receipt) — staff can find the sale and customer, then check the recorded warranty terms

Decide — inside warranty → repair, replace or send to the distributor per your policy; outside → quote a paid repair, no argument needed

Record it — the claim and its resolution sit on the unit’s history, so a second claim on the same device is visible, not fresh news

Replacement (if it happens) — the swapped unit’s serial returns to the claim record; the new unit’s serial attaches to the customer — one clean line of custody

After-sales checks — serial, warranty and service handoff

CUSTOMER SAYS	YOU VERIFY
“I bought it here last month”	Serial lookup: sold here, that date, that branch — or *not in the register* (grey-market unit, politely declined)
“It’s still under warranty”	Sale date + warranty period = in or out, in one glance — no box receipt archaeology
“You already repaired this twice”	The unit’s claim history is attached to its serial — the third claim is a different conversation

CUSTOMER

I lost my receipt, but I definitely bought this UPS from you.

Turn it on — we read the serial. If we sold it, the register shows your name and the exact date. If we didn’t… it doesn’t.

Next → the online shop — same stock, open all night.

ONLINE STORE

Store settings & shipping

Online Store → Store Settings. The Gadget Store profile uses the **Tech Hub** theme — a clean spec-and-price storefront built for devices, with brand rows, category tiles and WhatsApp checkout.

Store Settings → Fill in each field

Store Slug
`zonatgadgets` — your public link for Instagram bio, flyers and WhatsApp status

Store Status
`Live` only once the pages below are filled — keep hidden while building

Description
"Genuine phones, computers & accessories with receipt-backed warranty. Showroom in Ikeja, delivery nationwide."

WhatsApp Number
Business line — powers the *WhatsApp Us* button and WhatsApp checkout (huge for electronics: customers verify specs before paying)

Store Email / Phone / Address / Default Branch
Shown to customers; `Showroom Floor` is where online orders draw stock

Checkout toggles
Allow Paystack Checkout (card/transfer online) · **Allow WhatsApp Orders** · **Allow Pay on Delivery** (Zonat Gadgets: *off* for high-value units — a ₦1.2m laptop is never sent unpaid)

Display toggles
Show Search Bar · **Show Category Chips** · **Show WhatsApp CTA** · *Allow Backorder* off — a serialized unit is either in stock or it isn't

Public Catalogue — showcase without checkout

The profile also enables the **Public Catalogue**: a read-only storefront — full catalogue, prices, stock states, WhatsApp CTA, but no cart. Zonat Gadgets runs the full store; a shop that only wants "see our prices online, buy in person" switches to catalogue mode instead.

Shipping

APPROACH	SETUP	ZONAT GADGETS'S CHOICE
Shipping Methods list	Pickup — free · Same-day rider (Lagos) — ₦3,000 · Nationwide (GIG) — ₦5,000	Flat, simple choices
City-based shipping	State → City → Fee rows; checkout prices itself by the customer's city	For growing interstate order volume

Shipping Notice at checkout: *"Phones and laptops dispatch within 24hrs, sealed in factory packaging with your serial on the invoice. Accessories ship same-day."*

Next → catalogue content and how an online order flows to delivery.

ONLINE STORE

Catalogue, content & orders

The Online Store menu splits three ways: the shop floor (*Orders, Online Products*), storefront content (*Homepage Builder, Banners, Testimonials, FAQs*), and configuration (*Appearance, Domains, Store Settings*).

Getting products online — Online Store → Online Products

Toggle each sellable product into the store. A device earns its slot with: a clean product photo, a real spec description (screen, storage, battery, warranty line — the questions every WhatsApp customer asks anyway), a price, and stock > 0. Flag hero devices **Featured** and new stock **New Arrival** to feed the homepage rails. Serialized units sell by quantity — the customer doesn't choose a serial number or IMEI online; fulfilment picks the physical unit.

Homepage Builder — the sections that matter

SECTION	ZONAT GADGETS'S CONTENT
Hero banner	"Genuine devices. Real warranty." over a clean device shot — Shop button to the catalogue
Featured categories	Computers, Smartphones, Accessories, Inverters & Solar, UPS — the tiles customers actually tap first
Featured products / best sellers / new arrivals	Flagged devices plus the store's own best-seller maths; restocks flagged *New Arrival*
Promo banner	"Back-to-school laptop bundle" — links to a curated category or product
Trust badges	"Genuine sealed units" · "Warranty on every device" · "Nationwide delivery"
Brands row	HP, Lenovo, Dell, Samsung, Tecno, APC, Must, Felicity — the brands on your product records
Testimonials	"Ordered Monday, delivered Tuesday — sealed unit, real warranty card"
FAQs	"Is it brand new and sealed?" · "How does warranty work?" · "Do you deliver outside Lagos?" · "Can I pay on delivery?"

An order arrives — Online Store → Orders

Customer checks out — Samsung Galaxy A-series + case, ₦215,000 + delivery fee via Paystack (or a WhatsApp order message)

Order lands — Orders list + the Online Orders dashboard card pings

Fulfil — Chidi confirms, picks the physical unit from Showroom stock (its serial number or IMEI is recorded with the sale when tracking is enabled), packs and prints

Deliver — rider assigned, status tracked to the customer's door

Follow up — the customer's record now holds the serial — any future warranty visit starts with proof already in hand

> **QR ordering:** print the store's QR code for the counter and the flyer — a walk-in who says "I'll think about it" becomes an online browser with your catalogue already open.

Next → what the numbers say — dashboards and reports.

MANAGEMENT

Dashboard & reports

The Gadget Store dashboard surfaces what this business watches: serial-tracked stock positions, margin by brand, low stock on fast accessories, and money held on account.

Dashboard cards — what each answers

CARD	ANSWERS
Sales / Purchase / Expense summaries	Today’s money in, stock bought, costs out
Serial-tracked Stock	Which tracked units are in hand, where (branch), and which sold — the register at a glance
Low Stock Alert	Products at or below their configured alert quantity — set thresholds on fast-moving phones, UPS units and cables
Online Orders	Store orders awaiting fulfilment
Pending Approvals	Discounts waiting on the owner’s sign-off
Customer balances	Wholesale accounts with unpaid invoices
Top products / brands	What’s actually carrying the month — computers, phones or power equipment?

Reports that run the month

REPORT	WHAT KELECHI READS FROM IT
Sales Report	Revenue by product, category, brand and channel — is Tecno or Apple paying the rent?
Profit / margin by product & brand	Real unit costs vs sale prices — a discounted supplier batch shows honestly
Stock Report / register	Serialized units on hand per branch; bulk stock counts; transfer history
After-sales reference	The sale, customer, unit identifier and service notes help staff review a claim; confirm coverage against supplier/manufacturer terms.
Customer balances	Reseller accounts overdue on invoices
Stock Adjustments	Every correction and transfer — the audit trail when a unit’s count doesn’t add up

Next → who does what — a day in each role.

ROLES

A day at Zonat Gadgets

The same shop, seen by the three people who run it.

Kelechi — Owner

- Morning: dashboard — yesterday’s sales, pending approvals, low stock, reseller balances
- Approve/decline two discount requests; release a wholesale invoice on terms to BrightGrid Solar & IT
- Weekly: reviews margin by brand and negotiates the next purchase with Lagos Tech & Power
- Rarely: Business Profile, roles, price catalogue — owner territory

Chidi — Sales rep

- POS all day — scans serials on serialized lines, pack sizes on accessories, wholesale button for resellers
- Warranty lookups at the counter when claims walk in — serial first, answers second
- Fulfils online orders as they land — pick, serial number or IMEI recorded, pack, schedule delivery
- End of day: sales history vs till count; returns logged against the original sales

Ngozi — Stock control

- Receives the Lagos Tech & Power shipment — status Received, every phone’s serial number or IMEI entered on the purchase row
- Transfers display units Stockroom → Showroom; the register always knows where each unit sits
- Weekly stocktake on serialized items — physical units vs register, no estimates
- Raises the accessory restock when cables hit alert qty

Next → one week end-to-end — shipment in, claims out.

WALKTHROUGH

One week, start to finish

Six smartphones, four UPS units and accessory stock arrive. Zonat sells through the counter, a reseller invoice and an online order while recording an installation handoff and after-sales check.

The complete week

Mon — Receive: Lagos Tech & Power delivers 6 × Samsung Galaxy A-series 128GB @ ₦118,000 each + 200 × Zonat USB-C cables @ ₦1,800. Ngozi posts the receipt into Stockroom, each phone's IMEI recorded at receipt; transfer 2 phones to Showroom Floor

Tue — Sell: walk-in buys 1 Samsung phone and a cable. Chidi selects the phone IMEI and takes payment; stock updates by one phone and one cable

Wed — Wholesale: BrightGrid Solar & IT buys 2 phones and a cable carton at its assigned prices. The invoice is on account; the customer statement shows the amount remaining due

Wed — Approval: a customer buys a UPS and requests a discount above Chidi's limit; the sale waits for Kelechi's approval, then completes at the approved price

Thu — Online: Paystack order — Samsung Galaxy A-series + case, ₦215,000 + ₦3,000 same-day rider. Chidi picks a sealed unit from Showroom, its serial number or IMEI is recorded with the sale where tracking is enabled; rider delivers by 5pm

Fri — Claim: customer reports that a UPS is not holding charge. The team checks the receipt and UPS serial where tracking is enabled, confirms the applicable warranty terms, then records the repair or supplier handoff

Fri — Close: tracked devices and branch stock reconcile against the physical count; margin report shows the week; BrightGrid account balance visible for follow-up

The same screens, other weeks

SCENARIO	DIFFERENCE
Accessory restock	Purchase only — quantity, no identity rows; pack prices do the selling
Used / trade-in units	Separate product per unit ("Samsung Galaxy A-series 128GB — Pre-owned") with its own serial — never mix with new stock
Supplier gives you terms	Purchase on account — supplier balance sits until you settle through supplier payments
Showcase only (no online selling)	Switch to Public Catalogue — prices and stock visible, checkout off, WhatsApp CTA on

Next → every term, explained once — the glossary.

REFERENCE

Terminology & setup checklist

Every word this workflow uses, in plain language.

Serial number	The manufacturer’s unique ID on a device — laptops, UPS units, consoles. One per physical unit; captured on the purchase row and picked at the sale.
serial number or IMEI	The cellular device’s unique ID — smartphones and cellular tablets. Same discipline as serials; read it off the box or the device’s own About screen.
Serialized item	A product flagged for serial number or IMEI tracking. Stock counts units, but each unit carries identity — required for phones with IMEI tracking, and computers/power equipment with Serial Number Tracking enabled.
Bulk item	An untracked product — cables, cases, chargers. Stock is a number; sales take a quantity.
Selling Unit	A declared pack on a bulk product — `Pack of 10`, `Carton of 50` — with its own price. Stock always counts in the base unit (pieces).
Warranty Period	The stated cover period for a product. Record the actual supplier/manufacturer terms and explain how the customer makes a claim.
After-sales reference	The sale, customer, unit identifier and service notes help staff review a claim; confirm coverage against the supplier/manufacturer terms.
Wholesale price	The reseller rate on each product. The POS wholesale button and account invoices apply it — no hand-typed discounts.
Manager approval	The guard on discounts above a rep’s limit — the sale waits in Pending Approvals for an owner decision.
Branch / Warehouse	Where a unit physically sits — Showroom Floor sells, Stockroom holds. Transfers move stock between them with a full trail.
Price Catalogue	The clean sell-price list the profile enables — the shareable, printable answer to “how much is it?”
Public Catalogue	A read-only storefront — catalogue, prices, stock states, WhatsApp CTA, no checkout. For shops that showcase but don’t sell online.
Store Credit	Refund value held on the customer’s record instead of cash-out — applies to their next purchase automatically.
Gift Card	A prepaid card sold at the till, redeemable in store or online — balance tracked on the card.
QR ordering	A printed scan-to-shop code — walk-ins open your online store on their own phone.

Quick pick — the setup order

YOU WANT	SET UP
Sell smartphones & computers	Categories + brands + IMEI Tracking for phones + Serial Number Tracking for computers/power equipment + purchases with identifiers
Add accessories	+ bulk products with pack selling units — no serials needed
Serve resellers	+ wholesale prices + customer accounts + POS wholesale button + account invoices
Handle claims confidently	+ warranty period per product + serial lookup at the counter
Sell online	+ Store Settings (slug, WhatsApp, Paystack) + Online Products + shipping + homepage content
