RETAIL COMMERCE PLATFORM

Skincare & Organic Cosmetics

USE CASE SCENARIO

Amara Botanicals

One brand, four ways it earns — formulate your own jars in batch runs, resell shelf-ready brands, book treatments and custom formulations, and ship orders from the online store. Every screen, every role, field by field.

START HERE

The four ways Amara Botanicals earns

A skincare business rarely sells just one way. Amara Botanicals mixes its own jars, keeps a shelf of trusted resold brands, runs a treatment room, and ships nationwide from its online store — MartPoint's Skincare & Organic Cosmetics profile supports all four at once.

Line A — Your own formulas

Formulate and jar your own products

You buy shea butter, oils, actives and packaging; the formula says what one batch consumes; a **Batch Run** deducts the ingredients and credits the finished jars. Full chain: **purchase → formula → batch run → best-before → sell.**

Line B — Resale shelf

Resell ready-made brands

CeraVe, Nivea, The Ordinary — bought from distributors, sold as goods. Each purchase captures the **batch lot and expiry date**, so near-expiry stock is flagged before it embarrasses you on a shelf.

Line C — Treatments & customs

Consultations, facials and bespoke formulas

Bookable treatments with a therapist assigned and commission tracked, treatment notes on every client, and a full **Custom Formulation** workflow — quote, deposit, sample, approve, formulate, cure, deliver.

The whole picture

- **Set up** ranges, sellable products, raw ingredients, packaging & services (once)
- **Buy** ingredients, jars and resold stock through Purchases — batch & expiry captured on receipt
- **Produce** — formula → Batch Run: planned → sourcing → mixing → cooling → filling → ready → completed STOCK CHECKED
- **Sell** — POS, invoices, wholesale sets, treatment bookings, custom formulations
- **Ship** — online store orders, WhatsApp orders, city-based delivery fees
- **Watch** — expiry alerts, production queue, deposit balances, recipe costing

> **Enable the profile:** Settings → Business Profile → Skincare & Organic Cosmetics. The moment it saves, the vocabulary changes across the app — Customers become **Clients**, categories become **Ranges**, recipes become **Formulas**, batches become **Batch Runs**, expiry becomes **Best Before**, staff on services become **Therapists**, and the storefront dresses itself in the **Verdant** theme. This guide uses those words throughout.

What you get on day one

SEEDED FOR YOU	CONTENTS
Units	Piece, Jar, Bottle, Tube, Set, Kilogram/Gram, Litre/Millilitre
Ranges (categories)	Face Care · Body Care · Cleansers & Toners · Serums & Actives · Soaps & Scrubs · Raw Ingredients · Packaging
Formula categories	Face Creams · Body Butters · Lotions & Emulsions · Serums & Oils · Soaps & Cleansers · Scrubs & Masks
Bookable treatments	Skin Consultation (30 min) · Facial Treatment (1 hr, ₦20,000) · Custom Formulation (1 hr)

Next → your sellable products — jars, serums and the resale shelf.

SETUP — STEP 1

Products: your jars & the resale shelf

Catalog → Product List → Add Product. Every sellable thing gets one product record — whether you make it or resell it. The fields are identical; only the answers differ.

Add a made product · Fill in each field

Item Type
`Item` — it is stock, not a service

Product Name
`Golden Shea Body Butter 200g` — put the size in the name so the till and the online store are never ambiguous

Product Code / SKU / Barcode
`GSB-200` · your own code, or scan the printed label barcode later

Brand
`Amara Botanicals` — your house brand on your own line; the maker's brand on resold goods

Category (your Range)
`Body Care` — this is also the shop-by-category tile on the online store

Base / Stock Unit
`Piece` — one unit = one sealed jar. Jars count individually, never in grams

Not for Sale
Unticked — this is what you sell

Recipe / BOM + Production Mode
No Recipe + Batch for now — the formula links to this product from the Recipe Book instead (next page). Leave Sale-deplete for made-at-the-counter scoops only

Sale Price / MRP
`6,500` retail · MRP `7,000` — cost arrives from the batch, so Purchase Price can start at `0`

Opening Stock / Alert Qty
`0` opening — produced stock comes from batch runs, never typed in · alert `10`

Unit/Variant row — Batch, Expiry, MFG
Batch/Lot, **Best Before** and **Made On** columns — filled per batch on the shelf (see the batch page)

Selling Units
`Case of 12` ×12 at `62,400` (—spa wholesale) · `Duo Set` ×2 at `12,000`. Stock always counts in pieces; customers buy in cases or singles

Add a resold product — same screen, different answers

Product Name / Brand / Range
`CeraVe Moisturising Cream 236ml · CeraVe · Face Care`

Base Unit
`Piece`

Purchase Price / Sale Price

`14,500 · 19,500` — cost is real here because you buy it finished

Batch / Expiry / MFG
Left for the purchase row — every restock gets its own lot number and expiry from the carton

Recipe / Selling Units
None — you never make it, you sell it as bought

Opening stock vs purchasing: type Opening Stock once for what you already own on day one. Every restock after that goes through Purchases → New Purchase so supplier history, batch lots and cost basis stay accurate.

Next → the items customers never buy directly — ingredients and packaging.

SETUP — STEP 2

Raw ingredients & packaging

Formulas can only consume items marked **Not for Sale**. That one flag keeps shea butter out of the till and tells the Recipe Book exactly what may be used as an ingredient.

One ingredient item per material · Range: Raw Ingredients

ITEM	BASE UNIT	PURCHASE PRICE	NOT FOR SALE
Raw Shea Butter (unrefined)	Gram	₦1.80 /g (₦1,800/kg)	**Ticked**
Coconut Oil	Gram	₦2.40 /g	**Ticked**
Sweet Almond Oil	Gram	₦3.50 /g	**Ticked**
Vitamin E Oil	Gram	₦40 /g	**Ticked**
Preservative (Optiphen)	Gram	₦25 /g	**Ticked**
Lavender Essential Oil	Gram	₦45 /g	**Ticked**
Kaolin Clay, Oat Flour, Fragrance oils…	Gram	per supplier	**Ticked**

Measure everything in the unit your supplier and your scale agree on — grams for butters, oils and actives keep small-batch maths clean. The seeded unit tree already knows `1,000 g = 1 KG` and `1,000 ml = 1 L`, so a purchase in kilograms still feeds a formula that measures in grams.

Packaging — Range: Packaging · also Not for Sale

ITEM	BASE UNIT	COST
Glass Jar 200ml (amber)	Piece	₦350
Printed Product Label	Piece	₦50
Shrink Safety Band	Piece	₦20
Pump Bottle 30ml · Tube 100ml · Gift Box	Piece	per supplier

Jars and labels live in the formula as ingredients too — a batch that fills 40 jars deducts 40 of each. Packaging stock now means something on the dashboard: if jars run out before the butter does, you see it in the shortage list before the batch completes, not on filling day.

DO

Give every ingredient a **purchase price per base unit**. That price is what the formula uses to cost each jar automatically.

DON'T

Never leave ingredients sellable "just in case" — a litre of coconut oil at the till looks like a product,

sells like a mistake, and breaks the formula's ingredient list.

Next → services, therapists and who may touch what.

SETUP — STEP 3

Treatments, therapists & roles

The three seeded treatments are already bookable. What remains is telling MartPoint who performs them — and who may approve, cost and configure.

Catalog → New Service — a bookable treatment

Item Type
`Service` — hours, not jars

Name / Price / Duration
`Glow Facial (Signature)` · `25,000` · 60 min

Commission
Percentage `15%` — what the therapist earns per completed facial

Deposit Required / Deposit %
`Yes` · `30%` — weekend slots especially; the booking holds a balance until paid

Roles & permissions — who touches what

PERMISSION	ALLOWS	TYPICAL ROLE AT AMARA
`recipes_view / recipes_add`	See and write formulas	Temi — formulator
`production_batches_view / _add / _edit`	Schedule and move batch runs through their stages	Temi — production
`custom_orders_view / _add / _edit`	Custom formulation orders, quotes, deposits, status moves	Temi + Femi
`treatment_notes_view / _add`	Treatment history on client records	Ada — therapist
`sales_add / items_view`	POS and invoices	Femi — front desk
`purchase_add / purchase_view`	Supplier orders and receipts	Amara / Temi
`online_store_view / _edit / _orders`	Storefront content, settings, order fulfilment	Amara / Femi
`manager_approvals`	Approves discounts above the limit	Amara only

Staff who work the treatment room get Operations → Staff Assignment slots, and their cut lands in Staff Commission — payroll reads the report, nobody re-counts appointments by hand.

FEMI · FRONT DESK

Ada does the facials, Temi makes the jars — but I sell everything at the till.

Right. Permissions split by job: Temi never sees pricing approvals, Femi never edits a formula.

Next → buying stock — ingredients, jars and the resale shelf.

PROCUREMENT

Purchases — with batch & expiry

Everything physical enters through Purchases → New Purchase. For a skincare store the critical detail sits in the second row of each line item: the receipt batch, expiry and manufacture date.

Purchases → New Purchase → Fill in each field

Supplier
`Ilaje Shea Co-operative` — or `Dermatics Distributors` for the resale shelf

Purchase Status
`Received` adds stock now — Draft / Ordered hold the record without touching stock, Partially Received posts only the received quantities

Branch (Warehouse)
`Lekki Store & Lab` — where the goods physically land

Items — quantity is in the item's base unit
Raw Shea Butter ×5,000 g @ ₦1.80 · Glass Jar 200ml ×500 pcs @ ₦350 · CeraVe Cream 236ml ×24 pcs @ ₦14,500

Receipt / Batch Details — the row under each item
Batch/Lot `CVC-08B` · **Barcode** scanned from the carton · **Rcv Qty** · **Expiry** the printed date · **MFG Date** if shown. Fill these on every resold cosmetic and every ingredient with a shelf life

Payment
Paid now, or credit — the supplier's balance tracks normally through supplier payments

Why every receipt needs its batch row

YOU CAPTURE AT RECEIPT	MARTPOINT USES IT FOR
Expiry date	Near Expiry & Expired Items alerts on the dashboard; the Reports → Expired Items list shows days left or days past
Batch/Lot	Recall answers — which purchase, which supplier, which lot is in that customer's jar
MFG date	Shelf-life maths — a 24-month cream bought 8 months old sells differently to a fresh one

Operations → Stock Rotation — sell the old lot first

Open it after every receipt. It lists each newly received batch beside the older lots still in stock for the same product — the physical instruction to move the old lot to the front of the shelf. This is FEFO in one glance: earliest expiry sells first.

TEMI · PRODUCTION

We received 24 CeraVe creams — but 8 from the last receipt are still on the shelf.

Stock Rotation shows the older lot's expiry beside the new one. Old goes to the front today, not at the stocktake.

Next → writing the formula — what one batch consumes.

PRODUCTION

Write the formula

Operations → Recipe Book → New Formula. Written once, reused every batch. Amara's first formula produces **40 jars** of Golden Shea Body Butter — and it counts the packaging as ingredients, because that is the truth of the cost.

Formula header → Fill in each field

> **Recipe Name**
> `Golden Shea Body Butter`

> **Category**
> `Body Butters` — the seeded formula categories match your ranges

> **Final Product**
> `Golden Shea Body Butter 200g` — only sellable products appear here; this is where completed batch output lands

> **Yield Qty / Yield Unit**
> `40` · `piece` (auto-filled from the product's base unit) — one run of this formula makes forty jars

> **Prep / Cook Time**
> `20` min melting & mixing · `40` min whip & fill — scheduling, not costing

> **Aging / Maceration (days)**
> `0` for whipped butter — use `4-6` on formulas that need cure time (CP soaps need weeks)

> **Sales Margin %**
> **Set to** `0` if you price products yourself — anything above zero rewrites the product's sale price at batch completion (cost × (1 + margin)). If you want the system to price it, set your real markup and let it

Ingredients — only Not-for-Sale items are offered

INGREDIENT	QTY PER BATCH	COST
Raw Shea Butter	6,000 g	₦10,800
Coconut Oil	1,200 g	₦2,880
Sweet Almond Oil	800 g	₦2,800
Vitamin E Oil	80 g	₦3,200
Preservative (Optiphen)	120 g	₦3,000
Lavender Essential Oil	60 g	₦2,700
Glass Jar 200ml	40 pcs	₦14,000
Printed Label	40 pcs	₦2,000
Shrink Band	40 pcs	₦800
Batch cost → per jar	**40 pcs**	**₦42,180 → ₦1,055/jar**

Each row also carries a **wastage %** — set `2–3%` on oils so sticking and spillage stay honest in the cost. The formula's cost card shows total batch cost and cost-per-unit live while you edit.

> **One formula per size:** the yield counts finished pieces and the jar is an ingredient, so a 100g jar version is its own formula and its own product. Don't try to make one formula stretch across sizes — a duplicated formula takes a minute and keeps every batch's costing exact.

Next → running the batch — the statuses that carry a batch to the shelf.

PRODUCTION

Run the batch

Operations → Production Schedule → New Production Batch. A batch groups what you intend to make and when. Temi runs one every Tuesday — the schedule shows the whole week at a glance.

New Production Batch → Fill in each field

> **Batch Name**
> `Body Butter — spa order week` — the code (PB-0042) is assigned on save

> **Batch Type**
> `Formulation` — the full skincare pipeline · `Filling Run` for repack-only jobs (decanting a bulk pail into jars without formulating)

> **Status**
> `Planned` — moves as the work moves

> **Scheduled Date / Time / Equipment / Assigned Staff**
> Tuesday 8:00 · `Double Boiler & Mixer B` · `Temi`

> **Items — Produce from Recipe**
> Add `Golden Shea Body Butter` `×60` piece to produce — the spa needs 60 jars, so the batch scales the 40-jar formula ×1.5

The skincare pipeline — Quick Status buttons on the batch

STATUS	MEANS
Planned	On the schedule, nothing consumed yet
Sourcing Materials	Temi is pulling stock off the shelf and weighing
Mixing	Melted, emulsified, whipping
Cooling	Resting before fill — the batch stays visible so nobody forgets it on the bench
Filling	Jars being filled, labelled, banded
Ready	QC done, waiting for sign-off
Completed	**This is the moment stock moves** — see below

What Completed actually does

Checks stock first — if any ingredient is short it refuses: “Cannot complete — not enough stock: Raw Shea Butter: need 9,000, have 5,400”. Buy or reduce, never fudge

Deducts scaled ingredients — 60 jars ×1.5 pulls 9,000 g shea, 1,800 g coconut, 60 jars, 60 labels… exact quantities per formula

Credits the finished product — Golden Shea Body Butter 200g +60 pcs, at true recipe cost

Posts one stock adjustment — reference `PB-0042 [PROD]`, every line traceable in the ledger

Records a production run — planned vs actual cost lands on the formula's run history

Then stamp the batch's shelf life

On Product List → Golden Shea Body Butter 200g → Unit/Variant row, enter **Batch/Lot** `GB-042`, **Made On** = production date, **Best Before** = +12 months. That row is what the expiry widgets watch — update it whenever a new batch becomes the shelf stock.

> **Filling Run:** bulk bought or leftover product being repacked (a 5 L pail into 30ml travel bottles) uses the Filling Run batch type — a short pipeline (Planned → Filling → Ready → Completed) because no formulation happens. **Sale-deplete:** the item's Production Mode alternative deducts raw grams at the till instead of batching — suited to scoop-at-counter products, not jarred lines you want batch-coded.

Next → selling — POS, sets, wholesale and the till day.

SALES

POS, sets & wholesale

Femi's till day is ordinary retail with two skincare extras: products sell in declared packaging units, and wholesale clients buy at wholesale price, not a negotiated discount.

At the till

SALE	TAP	STOCK EFFECT
One jar	Golden Shea Body Butter 200g → Piece	−1 pc @ ₦6,500
Gift pair	Same product → Duo Set ×2	−2 pcs @ ₦12,000
Spa case	Same product → Case of 12	−12 pcs @ ₦62,400
Wholesale invoice	Sales → New Sale → client `Oasis Day Spa`, wholesale price column	60 pcs @ ₦5,200 = ₦312,000
Resale shelf	CeraVe Cream 236ml → scan the carton barcode	−1 pc; expiry lot recorded at purchase stays on the stock trail

Client money features — all on for this profile

FEATURE	HOW AMARA USES IT
Loyalty points	Points per sale redeemable at checkout — repeat facials and refill buyers earn steadily
Gift Cards	"Glow Card" sold at the till, redeemed online or in store
Store Credit	Returns land as credit instead of cash-out for skincare (unopened only — see returns note)
Wholesale price	POS wholesale button flips the cart to wholesale pricing for account clients — no hand-edited discounts
Sales Returns	Sealed, unopened returns only — opened jars are refused at the counter by policy, not by software

Quotations → Sales for account clients

The spa negotiates quarterly. Sales → New Quotation prices the standing order; on acceptance it converts to the invoice. The purchase the spa places against it can link back via Fulfils Customer Order on the purchase form — traceability both directions.

CLIENT · OASIS DAY SPA

Sixty jars this month — same as last, plus two serums. Invoice us.

New Sale → Oasis Day Spa → Case of 12 ×5 → wholesale rate → account balance until they pay.

> **Expiry at the till:** if a near-expiry alert is showing, sell the flagged lot first — Stock Rotation tells you exactly which batch is front-of-shelf. Never let the newest lot block the oldest one.

Next → treatments, treatment notes and the bespoke side of the shop.

SERVICES & BESPOKE WORK

Treatments, notes & custom formulations

Products are half the brand. The treatment room and the made-for-one-customer formulations are where the profile earns its “& Services” side.

A consultation and facial day

Book — treatment is a sellable service; it can sell at POS, on an invoice, or on the online store’s services grid (Book button)

Assign — Operations → Staff Assignment puts Ada the therapist on the booking; her calendar lives there

Treat & note — Operations → Treatment Notes on the client: skin type, reaction, products used, photos/notes for next visit — the Treatment History dashboard card surfaces it

Commission — Staff Commission accrues Ada’s 15% per completed treatment automatically

Operations → Custom Orders — the bespoke formulation

Client
`Mrs. Adaeze Okonkwo` — a client record, so the order, deposit and history attach to her

Product Template
`Custom Face Cream (Bespoke)` — a sellable item flagged as a custom-order template, with the **Skincare workflow** selected in its Custom Order Settings

Custom fields the template asks
Skin type (dropdown) · Allergies/sensitivities (required) · Fragrance preference · Target concern (acne / hyperpigmentation / eczema) · Texture preference — captured once, printed on the order

Quoted Price / Deposit Required / Deposit Paid
`25,000` · `12,500` · `12,500` — the order does not move to production on a promise

Due Date / Assigned Staff
Two weeks · Temi

The skincare order pipeline

Quote sent · `quoted`

Deposit received · `deposit_paid` — the Deposit Balance dashboard card tracks it

Sampling — Temi makes a 15ml trial vial for the client to patch-test · `sampling`

Approved — client signs off on the sample · `approved`

Formulating → Curing — full batch made; emulsions rest before delivery · `formulating → curing`

Ready → Delivered — collected or dispatched; balance invoiced through normal sales · `ready → delivered`

A custom order can ride a production batch too — add it to a batch's items and the linked formula consumes ingredients on completion, like any recipe line.

Skincare Sets — the package feature

Catalog → Service Packages sells prepaid treatment plans ("6-Session Glow Plan") the client redeems over months. Product bundles at the till ("The Evening Ritual Set" = cleanser + serum + butter at one price) use the bundles feature — stock of each component still moves correctly.

Next → the online store — where the brand sells while the shop sleeps.

ONLINE STORE

Store settings & shipping

Online Store → Store Settings. The skincare profile ships with the **Verdant** theme (Botanica, Derma Pure and Terra Glow are the alternates under Appearance) — an editorial layout built for made-from-scratch brands, with concern-led shopping, routine sets and an Instagram journal.

Store Settings → Fill in each field

> **Store Slug**
> `amarabotanicals` — becomes your public link, shared on Instagram bio and WhatsApp

> **Store Status**
> `Live` only when the pages below are filled — keep it hidden while building

> **Description**
> "Handcrafted shea butters, soaps and serums — batched weekly in Lekki."

> **WhatsApp Number**
> Business line with country code — powers the WhatsApp Us hero button and WhatsApp checkout

> **Store Email / Phone / Address / Default Branch**
> Shown to customers; the branch is where online orders draw stock from

> **Featured Products Limit**
> 8 — how many flagged products the homepage rail shows

> **Checkout toggles**
> **Allow Paystack Checkout** (card/bank transfer online) · **Allow WhatsApp Orders** · **Allow Pay on Delivery**

> **Display toggles**
> **Allow Service Orders** (books treatments online) · **Show Search Bar** · **Show Category Chips** (your ranges) · **Show WhatsApp CTA** · Allow Backorder off — out of stock means out of stock on skincare

Shipping — two honest ways

APPROACH	SETUP	AMARA'S CHOICE
Shipping Methods list	Named options + fee + description (Pickup — free · Dispatch Rider — ₦2,500 · GIG Logistics — ₦4,000)	For simple, flat choices
City-based shipping	Toggle on, then list State → City → Fee rows: Lagos → Lekki ₦2,000 · Lagos → Yaba ₦2,500 · Abuja → Wuse ₦4,500 · Rivers → Port Harcourt ₦5,000	**Amara uses this** — the customer picks their city at checkout and the right fee prices itself

The **Shipping Notice** text sits above the options at checkout: "Same-day dispatch in Lekki before 2pm. Orders after 4pm ship next working day."

Next → what the customer sees — homepage, catalogue and order flow.

ONLINE STORE

Content, catalogue & orders

The Online Store menu splits into three: the shop floor (Orders, Online Products, Services), the storefront content (Homepage Builder, Banners, Testimonials, Instagram, FAQs), and configuration (Appearance, Domains, Store Settings).

Getting products online — Online Store → Online Products

Toggle each sellable product into the store. A product earns its place when it has: a clean photo (Product Image on the item card), a price, stock > 0, and a real description — the product page renders name, Range — Brand, price with discount strike-through, In stock, the description, size tag, sold-count, variant sizes and related products. Flag your hero products **Featured** and mark fresh batches **New Arrival** to feed the homepage rails.

Homepage Builder — the sections that matter

SECTION	AMARA'S CONTENT
Hero banner	"Skincare made in small batches" over a studio shot — Shop the Collection button
Shop by concern	Ranges render as concern cards — "Start with your skin concern": dryness, acne, glow, sensitivity
Featured products / best sellers / new arrivals	The 8 flagged products plus the rails the store computes itself — mark fresh batches New Arrival to feed the last rail
Featured services	Treatments render with a Book button — consultations and facials sell online
Routine banner (promo)	"The routine, together" — the full regimen sold as one story, one click through to the set
Trust badges	"Handmade weekly" · "No parabens" · "Pay on delivery"
Testimonials	Three client reviews with names
Journal (Instagram)	Latest posts pulled via the access token — "From the journal"
FAQs	"How do I patch-test?" · "What's in the butter?" · "Do you ship outside Lagos?"
WhatsApp consult + Store hours & contact	"Tell us about your skin on WhatsApp — a real person will help you build a routine"

An order arrives — Online Store → Orders

Customer checks out — 2 × Golden Shea + 1 × Glow Serum = ₦22,000 + Lekki delivery ₦2,000 via Paystack (or WhatsApp order, or pay-on-delivery)

Order lands — Online Store → Orders, plus the Online Orders dashboard card pings

Fulfil — confirm, pack from the default branch (stock drops), print invoice

Deliver — Operations → Delivery Scheduling assigns the rider and tracks it to the client's door

Follow up — Subscribers list + a WhatsApp message turns a first order into a refill cycle

> **Analytics & QR:** Online Store → Analytics shows what the store sells versus the till; QR Codes prints a scan-to-shop code for the counter display — walk-ins become online subscribers.

Next → dashboards and reports — what the numbers say.

MANAGEMENT

Dashboard & reports

The skincare dashboard template surfaces exactly what this business watches daily — nothing decorative.

Dashboard cards — what each answers

CARD	ANSWERS
Sales / Purchase / Expense summaries	Today’s money in, stock bought, costs out
Today’s Bookings & Pending Appointments	Ada’s treatment diary and unconfirmed bookings
Production Queue	Batch runs on the schedule and where each sits in the pipeline
Upcoming Events	Custom formulations approaching their due dates
Deposit Balance	Orders holding deposits — and who still owes the balance
Near Expiry / Expired Items	Which lots need selling first, which must come off the shelf
Low Stock Alert	Products and ingredients at or below alert qty — jars included, since they live in stock too
Recipe Costing	What a jar actually costs, from live ingredient prices
Online Orders	Store orders awaiting fulfilment
Treatment History / Commission Due	Recent client treatments; therapist payouts owed
Pending Approvals	Discounts or edits waiting on the owner’s sign-off

Reports that run the month

REPORT	WHAT AMARA READS FROM IT
Sales Report	Revenue by product, range, client and channel — is the resale shelf or the house line carrying?
Expired Items	Lots past or approaching Best Before, with days left/past and remaining stock — act before the write-off
Formula run history	Each batch’s planned vs actual cost — did the last shea shipment erode the margin?
Stock Adjustments	Every production post (`PB-0042 [PROD]`), every write-off, every correction — full audit trail
Staff Commission	Therapist earnings per period — payroll input
Customer/Client balances	Who owes on invoices, deposits and store credit

REPORT	WHAT AMARA READS FROM IT
Online Analytics	Store conversion, top products online, order sources

---

Next → who does what — a day in each role.

ROLES

A day at Amara Botanicals

The same brand, seen by the four people who run it.

Amara — Owner

- Morning: dashboard — sales summary, production queue, near-expiry, deposit balances, today's bookings
- Approve a wholesale discount request (`manager_approvals`); check staff commission before Friday payroll
- Weekly: Sales Report by range + online analytics; recipe costing when a supplier price changes
- Rarely: Business Profile, roles, store settings — owner-only territory

Temi — Formulator / Production

- Sunday: write or refine a formula in Recipe Book; check ingredient costs against last week
- Tuesday: open the batch → Sourcing → Mixing → Cooling → Filling; complete on sign-off
- Stamp the finished product's batch code, Made On and Best Before; produce a sample vial for Mrs. Okonkwo's custom order
- Low-shea flag on the dashboard → raise the ingredient purchase

Ada — Therapist

- Today's Bookings card → her diary; deliver the facial, update status
- Treatment Notes on the client after every session — reactions, products used, next-step advice
- Never touches formulas, costing or stock — her world is clients and appointments

Femi — Front desk

- POS all day: jars, sets, resold brands, treatment bookings, gift cards
- Online orders → confirm, pack, schedule delivery; WhatsApp orders logged the same way

Stock Rotation check when a receipt lands — old lots move to the front

End of day: Sales History vs. till count; sales returns for sealed jars only

---

Next → one week end-to-end — ingredients in, money out.

WALKTHROUGH

One week, start to finish

Oasis Day Spa orders 60 jars at wholesale; Mrs. Okonkwo's custom cream approves; two online orders ship. Every number below is what the screens actually show.

The complete week

Mon — Order: Oasis Day Spa, 60 jars @ ₦5,200 wholesale = ₦312,000 on account. Femi raises the invoice

Mon — Plan: Temi creates Batch `PB-0042` (Formulation), adds Golden Shea formula ×60 pcs

Tue — Gate: completing needs 9,000 g shea; only 5,400 g in stock → batch refuses: "not enough stock" → purchase 5,000 g from Ilaje Co-op (Received, with supplier lot)

Tue — Produce: Sourcing → Mixing → Cooling → Filling → Ready → **Completed**: 9,000 g shea + 60 jars + 60 labels… deducted once; product +60 pcs; adjustment `PB-0042 [PROD]` posted; run cost ₦63,270 ≈ ₦1,055/jar

Tue — Stamp: product's Unit/Variant row → Batch `GB-042`, Made On today, Best Before +12 months

Wed — Dispatch: 5 × Case of 12 loaded for the spa; invoice + delivery note printed; balance ₦312,000 sits on their account

Thu — Bespoke: Mrs. Okonkwo's 15ml sample approved → order moves Formulating → Curing (7 days) — remaining ₦12,500 invoiced on delivery next week

Fri — Online: Paystack order: 2 jars + Glow Serum, ₦22,000 + Lekki fee ₦2,000 → confirm, pack, rider scheduled — same-day dispatch before 2pm promise kept

Fri — Close: Stock Rotation check; Near Expiry card clean; production queue empty; week's margin visible on the sales report

The same screens, other weeks

SCENARIO	DIFFERENCE
Restock resale shelf	Purchase only — no formula, no batch; the lot/expiry row does the work
New 100g jar size	New product + new formula (yield in pieces, its own jar ingredient) — don't stretch the 200g one
Repack a bulk pail	Filling Run batch type — skips sourcing/mixing/cooling stages
Ingredient price change	Formula cost card + Recipe Costing widget update — margin checked before the next batch, not after

Next → every term, explained once — the glossary.

REFERENCE

Terminology

Every word this workflow uses, in plain language.

Range	What other MartPoint stores call a Category — Face Care, Body Care, Raw Ingredients, Packaging. Drives catalogue organisation and the online store's shop-by-category tiles.
Client	The skincare profile's word for Customer — holds purchases, bookings, treatment notes, deposits and store credit.
Not for Sale	The flag that makes an item an ingredient or packaging: visible in stock and formulas, invisible at the till. Required on every ingredient; never set on a sellable product.
Base / Stock Unit	The unit an item counts in — grams for shea butter, pieces for jars and finished products. The unit tree converts 1,000 g = 1 kg automatically.
Formula	The recipe in Operations → Recipe Book: ingredient quantities (Not-for-Sale items only), wastage %, yield, and the Final Product it produces. Written once, costed live.
Yield	What one formula run makes — `40 piece` means forty jars of the Final Product, with the jars themselves counted as ingredients.
Batch Run	One production run on the Production Schedule, carrying a formula (or custom order) and a quantity to produce. Batch types: **Formulation** (full pipeline) and **Filling Run** (repack only).
Skincare Pipeline	Planned → Sourcing Materials → Mixing → Cooling → Filling → Ready → Completed. Completed is the only status that moves stock — and it first verifies every ingredient is available.
Production Shortage	The "Cannot complete — not enough stock" refusal, listing exact needed-vs-available per ingredient — including jars and labels. Buy or reduce the quantity; never work around it.
[PROD] Adjustment	The stock-adjustment reference (`PB-0042 [PROD]`) every completed batch posts — the audit trail that turns a stock change into a traceable batch record.
Batch/Lot · Made On · Best Before	The product's shelf-life stamp. Purchased goods capture it on the purchase row; produced jars get it on the Unit/Variant row after each batch — the values the expiry widgets and Stock Rotation read.
Stock Rotation	Operations screen pairing each fresh receipt with older lots still in stock — the daily instruction for FEFO: earliest expiry to the front.
Selling Unit	A declared pack size on a product — `Case of 12`, `Duo Set` — with its own price. Stock always counts in the base unit; customers buy in packs.
Sales Margin % (formula)	If above zero, batch completion rewrites the product's sale price at cost × (1 + margin). Set `0` to keep manual pricing — the guide's recommendation for established price points.
Sale-deplete	Item Production Mode that deducts raw ingredients at the POS sale instead of batching — for scoop-at-counter products, not jarred batch-coded lines.
Treatment	

	A bookable service (facial, consultation): sells like an item, assigns a therapist, earns commission, and accumulates Treatment Notes on the client.
Custom Formulation	A Custom Order on the skincare pipeline: quoted → deposit paid → sampling → approved → formulating → curing → ready → delivered. Template fields (skin type, allergies…) are declared on the item's Custom Order Settings.
Skincare Set / Bundle	Service Packages = prepaid treatment plans; bundles = multi-product sets sold as one price at the till — component stock still moves correctly.
City-based Shipping	Store Settings option listing State → City → Fee rows; the checkout prices delivery by the customer's selected city, replacing flat shipping methods.
Public Catalogue	A read-only storefront of your products without checkout — for brands that want presence before they want online payments.

Quick pick — the setup order

YOU WANT	SET UP
Resell brands only	Products + Suppliers + Purchases (with batch/expiry rows) — skip formulas and batches
Make your own line	+ Raw ingredient & packaging items (Not for Sale) + Formula + Production Schedule
Add a treatment room	+ Services with appointment & commission + Staff Assignment + Treatment Notes
Sell bespoke formulas	+ Custom-order product template (Skincare workflow, spec fields, deposit)
Ship nationwide	+ Store Settings (slug, WhatsApp, Paystack) + city fees + Online Products + homepage content
