

IMPORT TEMPLATE

Item Import Guide

How to prepare a product CSV for supermarkets, minimarts and retail stores. Covers single products, variants, pack sizes, unit conversions and barcodes.

Before you start

This guide is about the spreadsheet only — how to fill it, not how to upload it in the app. Give the completed CSV to your MartPoint admin.

Use CSV, not Excel

Work in Excel or Google Sheets, then **Save As → CSV (Comma delimited) .csv**.
Uploading the .xlsx file will not work.

Keep the header row

Row 1 must contain the exact column names in the template. Do not delete, rename or rearrange them — extra columns are allowed to the right.

Parents before children

If you are importing variants, the parent row must come **before** the child rows that link to it. The child row uses the parent SKU.

Categories, brands and units are created automatically

If a category, brand, unit or tax name is not in the system yet, MartPoint will create it during import. Make sure the names are spelled the same every time.

❗ Numbers: do not type currency symbols, thousands commas or words like "Naira". Use plain numbers: 1000.50. The import removes commas, but it is safer to avoid them.

Base product columns

These are the 23 standard columns. Required fields must have a value for every product or parent. Child variant rows can leave some fields blank and inherit from the parent.

COLUMN	REQUIRED	WHAT TO ENTER	EXAMPLE
item_name	Yes	Product name. Leave blank for child rows to auto-build Parent - Variant.	Coca-Cola 350ml
category_name	Yes	Product category. Auto-created if missing.	Beverages
sku	No	Your product code. Used to link child variants.	COKE-350
hsn	No	HSN / SAC code if applicable.	2202
unit_name	Yes	Base / stock unit (Piece, Kg, Litre). Auto-created.	Piece
alert_qty	No	Low stock alert level.	10
brand_name	No	Brand. Auto-created if missing.	Coca-Cola
lot_number	No	Lot number if you track lots.	L2024A
price_before_tax	Yes	Purchase cost before tax.	80
tax_name	Yes	Tax name. Auto-created if missing.	VAT
tax_value	Yes	Tax percentage number.	16
tax_type	Yes	Inclusive or Exclusive .	Exclusive
sales_price	Yes	Selling price before or after tax depending on tax_type.	100
opening_stock	No	Initial stock in the base unit.	100
custom_barcode	No	Base item barcode.	BAR-COKE-350
seller_points	No	Loyalty points awarded on sale.	0

COLUMN	REQUIRED	WHAT TO ENTER	EXAMPLE
description	No	Short product description.	Chilled soft drink
discount_type	No	Percentage or Fixed .	Percentage
discount	No	Discount amount or percent.	0
mrp	No	Maximum retail price.	120
item_group	No	Single, Variants (parent) or Variant (child).	Variants
parent_sku	No	Parent SKU for child rows.	COKE-350
variant_name	No	Variant name for child rows.	Can

💡 **Variant child rows:** leave `item_name` blank and the system will create Parent - Variant automatically. Fill `parent_sku` and `variant_name` only.

Selling units (Pack / Piece / Box)

Use selling units when customers can buy the same product in different pack sizes, for example one piece, a pack of 6, or a case of 24. Each pack can have its own barcode and price.

How it works

- **unit_name** is the base/stock unit. Inventory is counted here.
- **selling_unit_1_unit** is how the customer buys it (Pack, Box, Case).
- **selling_unit_1_conversion** is how many base units are in that pack.
- **selling_unit_1_selling_price** is the price for the whole pack.
- **selling_unit_1_barcode** is what the cashier scans for that pack.

COLUMN	REQUIRED	WHAT TO ENTER	EXAMPLE
selling_unit_N_unit	Yes	Name of the pack size. Change the number for each extra unit.	Pack
selling_unit_N_conversion	Yes	How many base units are in this pack.	6
selling_unit_N_selling_price	Yes	Price to the customer for the pack.	550
selling_unit_N_wholesale_price	No	Wholesale price for the pack if you sell wholesale.	500
selling_unit_N_purchase_price	No	Your cost for the pack. Leave blank to use the base cost.	480
selling_unit_N_sku	No	Pack SKU.	COKE-350-PACK
selling_unit_N_barcode	No	Scannable barcode for the pack.	BAR-COKE-PACK
selling_unit_N_default	No	Type 1 or Yes for the unit selected by default at POS. The first unit is default if none is set.	1

i Tip: If the base unit is Piece, set the piece as one selling unit with conversion **1** so the cashier can sell one piece or a pack by scanning the correct barcode.

Barcode, batch, serial and IMEI records

For supermarkets this is usually needed for batch tracking, expiry dates or serial numbers. The pack barcode you want scanned at POS should be in the selling unit, not here.

COLUMN	REQUIRED	WHAT TO ENTER	EXAMPLE
barcode_N_barcode	Yes	The barcode for this batch/serial.	BAR-NB-BATCH1
barcode_N_batch	No	Batch or lot number.	BATCH001
barcode_N_serial	No	Serial number.	SN123456
barcode_N_imei	No	IMEI number for phones/devices.	356789012345678
barcode_N_purchase_price	No	Cost for this batch.	40
barcode_N_sales_price	No	Selling price for this batch.	60
barcode_N_mrp	No	Maximum retail price for this batch.	80
barcode_N_qty	No	Quantity available in this batch.	50
barcode_N_expire_date	No	Expiry date in YYYY-MM-DD format.	2026-12-31
barcode_N_mfg_date	No	Manufacturing date in YYYY-MM-DD format.	2025-01-15
barcode_N_warranty	No	Warranty in months.	12

⚠ POS barcode: the barcode scanned at the till belongs in `selling_unit_N_barcode`. Use `barcode_N_barcode` only if you are tracking batches, serials or IMEIs.

EXAMPLE

What a finished sheet looks like

Below is a simplified example. The parent is created first, then its variants. A single product is shown on its own row.

ITEM_NAME	SKU	ITEM_GROUP	PARENT_SKU	VARIANT_NAME	UNIT_NAME	SELLING_UNIT_1
Coca-Cola 350ml	COKE-350	Variants			Piece	Pack
(blank)	COKE-350-CAN	Variant	COKE-350	Can	Piece	Pack
(blank)	COKE-350-PLASTIC	Variant	COKE-350	Plastic	Piece	Pack
Notebook A5	NB-A5	Single			Piece	Pack

☒ Before sending the file, check this

✓

Saved as **.csv** , not .xlsx

✓

Header row is still the first row and is exactly as the template

✓

Parent rows appear before their child rows

✓

Numbers do not contain commas, currency symbols or words

✓

SKUs are unique per store (do not duplicate)

✓

Variant child rows have both `parent_sku` and `variant_name`

✓

Dates use **YYYY-MM-DD** (e.g. 2026-12-31)

When the sheet is ready, send the CSV to your MartPoint admin. They will upload it through the **Advanced Product Import** screen.
